

What is turbo spray tan?

The Airbrush Tanning System is FDA approved to give you a safe and healthy tan. Using DHA (Dihydroxyacetone), as the active ingredient, causes a natural reaction on the top layer of your skin to naturally produce a beautiful tan without the damage of the skin. My products are cruelty-free and made with natural and organic ingredients, and provide a universal color for all clients. This product is used on over 40 Hollywood sets and offered in the most luxurious salons and resorts worldwide. Jennifer Lopez, Paris Hilton, Kim Kardashian and Matt Damon are only a few of the celebrities that have used this product. Rich mahogany color, not orange, immediately beach beautiful! Fast drying, non-sticky, cucumber-melon scent!

Preparing for your tan

- Shower and exfoliate entire body before appointment focusing on lower half of your legs, toes, elbows and knuckles. You can use a washcloth, scrubbing mitt or loofah. Shave the day before your appointment.
- Do not apply moisturizer until after your post tanning shower. Lotions can act as a barrier.
- If you are on medication find out first if it alters the PH of your skin.
- Avoid perfumes to skin prior to tanning.
- It is recommended you remove makeup before the tanning process, but it is not absolutely necessary.

Although there has been no known side effects reported with the use of the active ingredient (DHA), pregnant women are advised to get doctor's approval.

Day of your appointment

- Wear loose fitting clothing along with flip flops/sandals. Wear a dark colored bathing suit or garment of preference to be tanned in. You may also use available disposable panties offered at no charge. The spray solution washes out of most clothing, but tends to stain light nylon material and leather.
- Expect tanning to take approx. 10 minutes with 5 minute drying time.

Gift Certificates Available

After your tanning session

- Do not wash your hands until first shower.
- Do not wear closed shoes or socks until first shower has been taken.
- Do not exercise. Sweating and perspiring immediately after tanning alters the reaction of the tan. You may exercise after your first shower.
- Wait at least 7-8 hours before showering.
- Shower with liquid soap and hitting important areas like underarms and private parts. Let soap and shampoo rinse the body and avoid scrubbing with loofah or mitt. Avoid taking long hot showers and baths. You will notice color washing off the first time you shower. This is normal. your skin will continue to tan as a self tan reaction occurs on your skin.
- Avoid Dove soap/shower gel and Curel lotion. These products will lighten your tan or make spotty.
- Pat dry with a towel after shower and do not rub intensely. Be prepared to see product on towel after the first shower only.
- Avoid moisturizer until after first shower.
- Avoid swimming or immersing yourself in water until first shower.
- Do not sit directly on leather or light fabric until your first shower.
- Do not scratch your body until your first shower.
- Do not wear heavy jewelry or hair ties on your wrist until after your first shower..

Be TAN Tonight!

Maintaining your tan

- Your tan will last for 7-9 days with proper care. Some individuals have proven to keep it longer.
- Apply moisturizer every time you shower to prolong your tan.
- Lotions with Alpha Hydroxy Acids are used to increase exfoliation, thereby fading your tan.
- Do not exfoliate or rub your skin.
- Chlorine from a pool or Jacuzzi can cause your tan to fade faster.
- To remove excess at the end of the life of your tan, shower and rub vigorously with a washcloth while showering.
